USE ONLY FOR FILING A PROVISIONAL APPLICATION FOR PATENT

This collection of information is required by 37 CFR 1.51. The information is used by the public to file (and by the PTO to process) a provisional application. Confidentiality is governed by 35 U.S.C. 122 and 37 CFR 1.14. This collection is estimated to take 8 hours to complete, including gathering, preparing, and submitting the complete provisional application to the PTO. Time will vary depending upon the individual case. Any comments on the amount of time you require to complete this form and/or suggestions for reducing this burden, should be sent to the Chief Information Officer, U.S. Patent and Trademark Office, U.S. Department of Commerce, Washington, D.C. 20231. DO NOT SEND FEES OR COMPLETED FORMS TO THIS ADDRESS. SEND TO: Box Provisional Application, Assistant Commissioner for Patents, Washington, D.C. 20231.

SWITCHABLE HYDROBUSHING WITH POST-MOLDING
FORMED TRAVEL RESTRICTOR FEATURE IN A
VIBRATION-REDUCTION MOUNT WITH INTERLOCK FEATURE

Brief Description of the Invention

The invention includes a switchable (through DC linear actuator activation) hydrobushing mount to create a fully switchable coupled/decoupled hydrobushing. The invention also provides a method of performing a post-molding forming operation on the bonded-to metal surface/structure to allow the use of a secondary operation peened fastener to provide triaxial travel restriction of a vibration reduction mount. Further, the method performs an in-molding reorientation of the metal surface/structures to generate a fully interlocked vibration reduction mount.

Advantages of the Invention

The invention provides the ability to have a fully switchable hydrobushing design, with superior low amplitude (decoupled) performance over a conventional hydrobushing. The design has significant engineering flexibility (rate ratios and packaging) over conventional hydromounts by using a realistic, manufacturable design concept that does not rely upon expensive vacuum switching hardware.

A method is provided which has the advantage of utilizing existing metal components to support triaxial travel restriction in a vibration reduction mount. Application requirements and ultimate fatigue life of the vibration reduction mount are directly tied to the overall ability of the mount design to limit allowable travel and to provide final metal-to-metal interlock features. By using a post-molding forming

operation to orient the support tabs of an existing metal, these goals can be accommodated without a secondary structural component, thus reducing part cost, complexity, and mass.

The method further provides a fully interlocked vibration reduction mount structure. Typical design and manufacturing processes require the use of secondary processes and/or additional components to provide fully interlocked construction. By utilizing a rotation interlocked feature in the part design, these same goals can be achieved with the elimination of either a secondary process or additional structural member. A significant advantage of the invention is that it allows the injection/expansion molding of a vibration reduction mount that is fully interlocked after the molding process.

Further detail and advantages of the invention can be more clearly appreciated through the accompanying drawing figures.

Brief Description of the Drawings

The numbered items in the drawings figures are described as follows:

1. Molded assembly
2. Travel restrictor pin

Technical drawing of a mechanical part, likely a shaft or rod, showing dimensions and feature callouts. The drawing includes a central section with a circular feature and a cross-section labeled 'C'. Dimensions are provided in millimeters (mm).

Key dimensions and features:

- Overall length: 112
- Distance from left end to first feature: $\phi 10 \pm 0.1$
- Distance from first feature to second feature: 56
- Distance from second feature to third feature: 30.1
- Distance from third feature to fourth feature: 32.7
- Distance from fourth feature to end: $\phi 10.1 \pm 0.1$
- Feature callouts: A, B, C, 2X, 5°, 1
